

Missouri Traffic Crashes

**2019
Edition
2017 & 2018
Statistics**

**Department of Public Safety
Missouri State Highway Patrol**

Introduction

This booklet is published by the Missouri State Highway Patrol as an aid to persons who are interested in the traffic crash problem in Missouri. It contains information which provides for a comprehensive look at the Statewide crash problems as experienced in 2017 and 2018.

The Missouri State Highway Patrol is the central traffic crash data collection agency for the State of Missouri. Data on both rural and urban traffic crashes is made available to this agency. Law enforcement agencies throughout the State provide the Highway Patrol with copies of their crash reports. All reports of traffic crashes including those investigated by the Missouri State Highway Patrol are tabulated and analyzed by this agency. It is thus due, in part, to the continued cooperation of these law enforcement agencies that a meaningful picture of the statewide crash experience is available to interested persons.

2017 Statistics

Interesting Statistics

- In 2017 there were 923 persons killed in traffic crashes in the State of Missouri, 24 (-2.5%%) more than in 2016 . There was a increase of about -3.0% in total crashes statewide compared to 2016.
- Alcohol/drugs and speeding are the two highest Probable Contributing Circumstance in fatal crashes. Of all fatal crashes, 34.8% involved speed and 22.2% involved alcohol/drugs.
- Of all persons killed in Missouri traffic crashes in 2017, 351 (38.0%) were in the 15-35 age group. The age group most overrepresented in Missouri fatal traffic crashes is 15-24 group (187 killed, 20.3% of the total).
- It is interesting to note that in known cases only 12% of all traffic crashes occurred during inclement weather (rain, snow, sleet/hail, freezing temp., fog or mist).
- Of all traffic crashes reported statewide, 73.9% were property damage only.
- Of all traffic crashes, 71.9% occurred during the daylight hours and 82.7% occurred on dry pavement.
- Of all fatal Missouri traffic crashes, 60.0% involved only one vehicle.
- Jackson County recorded the most traffic fatalities with 111.

*It is hoped that the information in this booklet will be of value to you.
Certainly it is the most comprehensive look available at the crash problem in Missouri.*

Traffic Safety Statistics

1991 - 2017

¹ Number of deaths per 100 million miles of vehicle travel.

² Number of deaths and injuries per 100 million miles of vehicle travel.

³ The 1995 cost figures have been calculated using a different National Safety Council cost estimate formula.

The 1993 and 1994 cost figures also have been recomputed using this formula. As a result, the 1993 and 1994 costs displayed in this publication are different than those previously published. 1993 - 1995 costs are not comparable to prior years since different cost formulas were utilized.

Year	Killed	Injured	Economic Loss	Licensed Drivers	Vehicles Registered	Miles Traveled	Death ¹ Rate	Injury ² Rate

Statewide Traffic Deaths by County

These numbers include both rural and urban traffic deaths for each county and the City of St. Louis. The City of St. Louis is carried separately because it is not located within a county.

10 year average (the average deaths per year for the last ten year) -- +/- (increase or decrease of traffic fatalities in each county from the year 2016 to 2017. If there is no change it will be indicated by a 0)

Drinking and Crashes (Includes drivers of all vehicles and pedestrians) - Whether or not a person has been drinking cannot always be determined at the scene of a crash. It is generally impossible to determine the persons who have had one or a few drinks; yet, these individuals may be as much of a hazard as the obvious drunk. Because of the time lapse from the moment of occurrence until an officer arrives at the scene to make the investigation, a person's condition concerning drinking can change a great deal. In cases where the individual may have been removed to a hospital, doctor's office or funeral home, his condition may never be determined.

	2017	9	78	From 6:00 p.m., Friday, December 29, 2017, to Midnight, Monday, January 1, 2018.

2018 Statistics

Interesting Statistics

- In 2018 there were 921 persons killed in traffic crashes in the State of Missouri, 2 (-.2%) less than in 2017. There was a increase of about 1.6% in total crashes statewide compared to 2017.
- Alcohol/drugs and speeding are the two highest Probable Contributing Circumstance in fatal crashes. Of all fatal crashes, 36.6% involved speed and 23.2% involved alcohol/drugs.
- Of all persons killed in Missouri traffic crashes in 2018 , 344 (37.4%) were in the 15-35 age group. The age group most overrepresented in Missouri fatal traffic crashes is 15-24 group (179 killed, 19.4% of the total).
- It is interesting to note that in known cases only 17.9% of all traffic crashes occurred during inclement weather (rain, snow, sleet/hail, freezing temp., fog or mist).
- Of all traffic crashes reported statewide, 74.9% were property damage only.
- Of all traffic crashes 71.5% occurred during the daylight hours and 74.7% occurred on dry pavement.
- Of all fatal Missouri traffic crashes, 58.1% involved only one vehicle.
- Jackson County recorded the most traffic fatalities with 90.

*It is hoped that the information in this booklet will be of value to you.
Certainly it is the most comprehensive look available at the crash problem in Missouri.*

¹ Number of deaths per 100 million miles of vehicle travel.

² Number of deaths and injuries per 100 million miles of vehicle travel.

³ The 1995 cost figures have been calculated using a different National Safety Council cost estimate formula.

The 1993 and 1994 cost figures also have been recomputed using this formula. As a result, the 1993 and 1994 costs displayed in this publication are different than those previously published. 1993 - 1995 costs are not comparable to prior years since different cost formulas were utilized.

Statewide Traffic Deaths by County

These numbers include both rural and urban traffic deaths for each county and the City of St. Louis. The City of St. Louis is carried separately because it is not located within a county.

10 year average (the average deaths per year for the last ten year) -- +/- (increase or decrease of traffic fatalities in each county from the year 2016 to 2017. If there is no change it will be indicated by a 0)

County	2018	10 year Average	+/-

Drinking and Crashes (Includes drivers of all vehicles and pedestrians) - Whether or not a person has been drinking cannot always be determined at the scene of a crash. It is generally impossible to determine the persons who have had one or a few drinks; yet, these individuals may be as much of a hazard as the obvious drunk. Because of the time lapse from the moment of occurrence until an officer arrives at the scene to make the investigation, a person's condition concerning drinking can change a great deal. In cases where the individual may have been removed to a hospital, doctor's office or funeral home, his condition may never be determined.
